The Dutch company Bols choose for inSynergie

The Dutch company Bols choose inSynergie for the implementation of their multimedia presentations in there musea : The house of Bols

The system contains ; solid state video players, interactive players, interactive recorder player,(to allow the visitor to make his own film, and send it by e-mail to whoever you like), and the iSmovieMachine what generates a 280° image, with a tailor made clip around bartending and enjoying the Bols cocktails.

The hart of the system is the iSMaster what controls the entire system, and drives via the network all the in the system used computers, besides the video, the systems controls also the lighting in the museum.

The 280° image is generated by four iSmovieMachines, driving four projectors on one round screen, the correction of the image to become an image what sooths perfect on the round screen is all done by the iSmoviemachine. The result of the four projectors, a set of speakers, and the special created electro track results in a stunning AV experience around bartending.
